

Project & Group Selection

Group 2

Members:

Ajo Cherian Thomas

Jin Taek Lee

Thishone Wijayakumar

Project Choices:

1. Plant Automated Watering system
 - This application has a large market in the industry. With our combined experiences of working with Sensors during Co-op and previous projects, we are confident in completing this project with additional IoT features if required. The sponsor requested for this project to be done using Arduino/Raspberry Pi, but we can take that a step further and develop it on a PCB
2. Node to node Mesh Network – Mike
 - Very interested in the application. Experience available within the group for working with Mesh Networks
3. Digital Santur
 - All members have Musical background. Music production background also exists. Interested to learn more about digitizing music.
